

Photo-Facial Skin Rejuvenation

Safely and comfortably fade the appearance of skin imperfections caused by the sun, and uneven skin tones caused by brown and red spots (such as Rosacea, spider veins and age spots). Refine large pores and stimulate collagen.

How does skin rejuvenation work?

The combined bi-polar radio frequency and light energies precisely and safely target pigmented lesions such as freckles, sun spots and age spots. Vascular lesions such as spider vessels and redness from Rosacea are also lightened and gradually fade.

Is skin rejuvenation right for me?

Most skin types can benefit from skin rejuvenation. We cannot treat clients who have a suntan or sunburn or are using sunless tanning lotion.

When will I see results?

Gradual improvement of skin tone is typically achieved in 3 treatment sessions. The total number of required treatments depends on your skin's condition. Schedule a consultation to establish your personalized treatment schedule.

How does the treatment feel?

You may experience a warm, pinching sensation. Cooling of the skin surface ensures additional safety during treatment. Most clients return to normal activities after treatment.
